

ReadMe Notes

Malware Analyzer prerequisites:

1. Make sure you have python3.7
2. Tool requires following libraries
 - a. Androguard
 - b. Catboost
 - c. Dash plotly
 - d. Gensim
 - e. Scikit-learn
3. Install above libraries by running the script.sh(for linux/mac) or script.cmd(for windows)
4. Change the root_path in the constants.py file to the path of the dashUI folder

To run the application:

1. Navigate to the dashUI folder and run the following command:
\$ python main.py
2. Application will run on address: 127.0.0.1:8050

Refer to UiDocumentation.pdf for more details.
